

BIBEON

Collapsible baby bottle, designed and made in France

TECHNICAL BRIEF — PRESENTATION BOX, INSERT AND COTTON POUCH

We are a French brand looking for a long-term manufacturing partner. This document contains every dimension you need to quote. Please read it before replying: we are not looking for a catalogue product, and a reply that offers one will not be considered.

WE NEED A FACTORY, NOT A TRADING COMPANY.

In your reply, please state: (1) your factory address, (2) whether you own the die-cutting and printing equipment, (3) your FSC / GOTS certificate numbers. Replies that do not answer these three points will not be shortlisted.

1 · WHAT WE ARE SOURCING

Item 1	Triangular presentation box, tent shaped, with a drop-down front panel. One single die for three contents (1, 2 or 3 bottles).
Item 2	Paperboard insert (3 pieces, slotted, no glue) — SAME board as the box, quoted as a separate line.
Item 3	Drawstring pouch in GOTS certified organic cotton, one per bottle.

2 · THE PRODUCT THAT GOES INSIDE

Shape	Truncated cone (folded collapsible bottle)
Base diameter	65 mm
Cap diameter	38 mm
Height	98 mm
Weight	35 g, cap included
Nature	Dry, light, no sharp edge, no load-bearing requirement

3 · MATERIALS — PLEASE QUOTE BOTH

Version A — retail	Solid board (compact, not corrugated), IVORY, UNCOATED, approx. 350-400 g/m ² . No lamination, no gloss. FSC certified.
Version B — e-commerce	E-flute micro corrugated, same shape and same dimensions, so the box can travel on its own.
Printing	One or two spot colours. Navy #002445 and sage #AAAF87. No four-colour process, no lamination. Please quote 1 colour and 2 colours separately.
Important	The board must be dyed in the mass or naturally ivory. A pale flat tint printed on white uncoated board mottles, and we will reject it.

4 · THE BOX

PLAN 1 — Flat blank of the box (one single piece)

Solid line = cut · dashed line = crease. All dimensions in millimetres. Overall blank 560 x 230 mm.

The two side cheeks are two equilateral triangles, side 180 mm, die-cut separately and glued (better material yield than side flaps).

CRITICAL — the ridge is NOT a crease and NOT a glue line. The two slopes simply meet there when the box is closed. No hinge may run along the top edge.

The only working hinge is between the fixed front band and the drop-down front panel, 39 mm above the floor.

Overall shape	Equilateral triangular prism (tent), side 180 mm, length 230 mm, ridge height 155.9 mm
Flat blank	560 x 230 mm, one single piece, four creases
Creases	20 (tuck-in flap) / 135 (drop-down front panel) / 45 (fixed front band) / 180 (bottom) / 180 (back panel)
Side cheeks	Two equilateral triangles, side 180 mm, die-cut separately and glued
Opening	The front panel drops forward like a drawbridge and reveals the bottles standing upright
Closure	Half-moon tuck-in flap

5 · WHY THE DIMENSIONS ARE WHAT THEY ARE

PLAN 2 — Cross-section, bottles standing upright

Triangle side	180 mm
Ridge height	155.9 mm
Length	230 mm
Bottle	truncated cone
base diameter	65 mm
cap diameter	38 mm
height	98 mm
weight	35 g
Cells in the insert	3 x 76.7 mm
Front corner band	54 mm
Bottle band (under ridge)	72 mm
Rear corner band	54 mm

CRITICAL

Bottles sit ON THEIR BASE, cap upward.
No device may present them upside down
or hide the cap: a printed label goes on it.

A cylinder cannot stand under a sloping roof, but a truncated cone can. At side 180 mm the bottles stand on their base with 25 mm of clearance above the cap. Below side 167 mm no arrangement works at all. If you already own a die for an equilateral triangular tube between 170 and 200 mm side, TELL US: we will adapt the insert to your tooling rather than pay for a new die.

6 · THE INSERT

PLAN 3 — The insert: three pieces, no glue

Same board as the box. Solid line = cut · dashed line = crease.

Piece 1 — folded U **blank 212 x 230 mm**
creases at **70 and 142**
four notches **35 mm deep**
Pieces 2 and 3 — dividers **73 x 70 mm each**
notch **35 mm deep, centred**
Cells obtained **3 x 76.7 mm**
Assembly **slot together, no glue**
Same insert for **1, 2 or 3 bottles**

Empty cells hold a cotton pouch: one single die and one single insert serve all three contents (1, 2 or 3 bottles). Please quote the insert as a SEPARATE LINE.

CRITICAL — Bottles sit ON THEIR BASE, cap upward. A printed label goes on the cap and must stay visible. No device may present them upside down or hide the cap.

CRITICAL — The ridge is neither a crease nor a glue line. The two slopes simply meet there when the box is closed. No hinge may run along the top edge: it is our brand signature and it must stay sharp and unmarked.

7 · THE COTTON POUCH

One pouch per bottle. This is the only piece of packaging the customer keeps and reuses, so material quality matters more than price on this item.

Material	100% organic cotton, GOTS certified. Natural undyed ecru. 118 to 140 g/m2.
Version A	Flat pouch, finished 120 x 170 mm (flat width x height)
Version B	Pouch with a rectangular base, approx. 110 x 170 x 70 mm, so it stands upright. Please quote both, we want to see the difference.
Closure	Double drawstring channel, 25 mm from the top edge, organic cotton cords exiting on both sides
Printing	Screen print, 1 colour, water-based ink, logo approx. 45 mm wide, one face. Please also quote the plain unprinted version.
Why 120 mm	The rigid 65 mm base needs 204 mm of circumference. A 100 mm flat pouch gives only 200 mm and woven cotton does not stretch. 120 mm gives 240 mm and the bottle slides in freely.
Also quote	The same pouch in organic velvet, and a larger knot-tie wrap able to hold three bottles upright plus nappies and wipes (useful volume approx. 200 x 220 x 90 mm).

8 · QUANTITIES

Please quote each item at 500 / 1 000 / 2 000 / 5 000 pieces. We are starting with a small European run and will place the volume order once the market is proven. We are looking for the supplier who will still be ours at 20 000.

9 · WHAT YOUR QUOTATION MUST CONTAIN

Unit price	At each quantity, EXW and FOB, stating the port
Tooling	Cost of the cutting die, and whether it is amortised or refunded on a repeat order
Setup	Screen or plate setup charges, per colour
Sample	Cost and lead time of a physical sample. We will send you a real bottle so the sample is built around the actual object.
Lead time	Production lead time after approval of the sample
Freight	Export carton dimensions, pieces per carton, gross weight — and your quotation for air freight AND sea freight to France (Montlucon, 03100)
Certificates	FSC number for the board, GOTS number for the cotton, and what we are allowed to print
Existing tooling	Whether you already own a die for an equilateral triangular tube, side 170-200 mm

We answer every technical question within one working day, in English. Suzanne de Begon, founder — BIBEON, Montlucon 03100, France.
