

BIBEON — IVORY DISPLAY BOX · REQUEST

Made in France · August 2026 · three pages, on purpose

WHAT WE ARE LOOKING FOR, IN ONE SENTENCE. An IVORY box — ivory inside and outside — that opens to show one, two or three bottles standing upright, held in a paper insert. One box that works both for e-commerce and for a shop shelf. We are not asking anyone to invent a structure. We are asking which of these you already make.

THE MATERIAL — this is the part we care about

IVORY, inside and outside. Not kraft, not brown, not printed to look ivory if it can be avoided. A warm off-white, close to #F3EEEE4.

Uncoated and matt if you have it. **No plastic lamination film**, no gloss, no foil.

Solid board or corrugated — whichever you make. A rigid lift-off box, a folding carton, or E-flute with an ivory liner on both faces. All three are acceptable.

If the board is delicate, the box may travel inside an outer mailer or kraft envelope. Tell us if you supply one, and quote it — we want the **total** cost, not only the box.

Please tell us which ivory you actually hold in stock — dyed through, ivory-coated, or white. A photograph of the board edge in daylight settles it in one second.

PRINTING

One colour only, outside — navy #0E1C35. Print-ready vector artwork supplied. Please also quote the box **unprinted**.

THE INSERT

A **paper insert** holding the bottles upright, plus room for three folded cotton pouches, a leaflet and a label sheet. Made **however you normally make inserts** — die-cut tray, slotted pieces, glued or not. **No foam, no plastic, no thermoformed tray.**

THE ONLY THING THAT IS NOT NEGOTIABLE. The bottles must be seen, standing, the second the box is opened — a lift-off lid or a front panel that folds down. A box that opens only at the ends hides them, and then the box is pointless. Everything else is open to discussion.

WHAT WE NEED FROM YOU, IN THIS ORDER

1. Do you **already make** something close to this? If yes, send it — that is the fastest answer and probably the best one.
2. Your **MOQ**. Please do not discard our enquiry because a first order is small; tell us your number and we will work with it.
3. Your **structural drawing**, dimensioned.
4. A **3D visual or rendering** — the box closed, and the box open with the three bottles standing inside.
5. **Unit price** at your MOQ and at 1,000. An indicative figure is enough at this stage.
6. **Air and sea freight**, delivered to 03100 Montluçon, France.
7. **Sample cost and lead time.** We will only order a physical sample once the drawing and the price are agreed — we work on screen first.

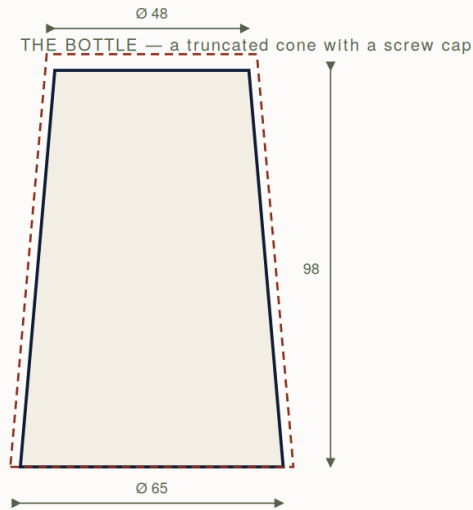

WE ARE FLEXIBLE ON EVERYTHING ELSE

Exact dimensions. Glue. Assembly method. Board grade and grammage. Solid or corrugated. The closure. The way the insert is built.

Suzanne de Bégon · Founder · BIBEON · 03100 Montluçon, France · www.bibeon.fr

1 · THE PRODUCT AND WHAT GOES IN THE BOX

All dimensions in millimetres.

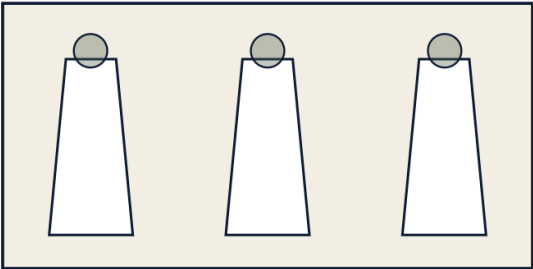

35 g complete
dashed = safety envelope
Ø70 base · Ø52 top · 102 high
a CONE of revolution, not a block
tolerance already included

WHAT THE BOX CONTAINS

- **3 bottles**
standing upright, cap up
- **3 cotton pouches**
folded flat, about 90 × 130 × 6 each
- **1 leaflet**
folded, about 70 × 70
- **1 label sheet**
about 145 × 73, folded once

The same box must serve 1, 2 or 3 bottles.
Unused cells simply receive a folded pouch.
One design only — I do not want three.

THE ONE THING THAT MATTERS

seen the moment the box is opened

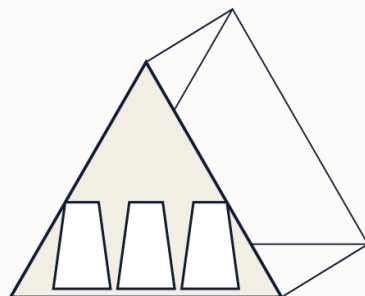

The bottles must be SEEN, standing, the second the box opens.
The cap carries the instruction label — it must be readable
without touching anything.

A lift-off lid is perfect. A front panel that folds down is perfect.
A box that opens only at the ENDS is not: it hides the bottles.

2 · TWO SHAPES — both acceptable. Tell us which one you already make.

These are intentions, not diecut files. We will adapt to your standard sizes and to your standard opening.

SHAPE A — the triangular prism · « toblerone »

equilateral side 175 · length 230 · height 152

If you already make a toblerone box near this size, we want it.

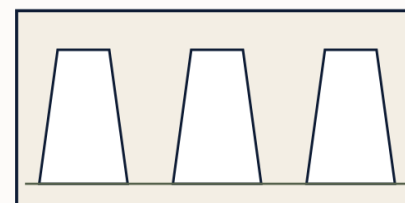

If your standard size differs, give us yours — we adapt the insert.

It must NOT open at the ends: that hides the bottles.

A front panel folding down, or a tear strip across the front — whichever your tooling already does. Propose your own.

We are NOT asking you to develop a bespoke diecut.

SHAPE B — the rectangular box, lid lifted off

die-cut insert holding the bottles upright

230

around 230 × 120 × 120 inside — your closest standard size is fine

A rigid lift-off box, a folding carton or a mailer — whichever you make.

The accessories may sit beside the bottles, or under a raised deck with the bottles standing on it. Both suit us; choose the cheaper.

This shape is our fallback and it is a real one.

If your triangular box does not exist, quote this instead.
